

The Medical Minute: Hold the added sugar

9 May 2019

The sugar in fruit is different from the sugar in a doughnut, according to Kara Shifler Bowers, a registered dietitian and project manager at Penn State PRO Wellness.

"Natural sugars in fruit are different because fruits carry fiber as well as many antioxidants and vitamins such as A and C," Shifler Bower said.

Experts say women should consume no more than six teaspoons or 25 grams of added sugar each day. For men, the amount is nine teaspoons or 36 grams. For women, this is just 2/3 can of soda or 1.5 dessert-like yogurts.

It takes plenty of willpower, but cutting out all added sugars could solve a host of health problems. "The only danger in cutting out added sugars completely is that eventually, one may binge," Shifler Bowers said.

But what can a hardcore chocoholic do?

Instead of totally eliminating sugar and [chocolate](#), she suggests having a small piece of chocolate such as a dark chocolate Hershey's Kiss to curb cravings rather than an entire candy bar.

"Sometimes people may actually be craving the magnesium in real cocoa," Shifler Bowers said. "To curb chocolate cravings, have just a few dark chocolate-covered almonds, which are high in magnesium."

Sticking with whole foods such as fruits and vegetables might also curb added sugar intake. Even seemingly [healthy choices](#) such as yogurt, fiber bars, protein bars and spaghetti sauce can hide loads of added sugars. "In granola bars, the sugars help ingredients stick together," Shifler Bowers said. "In spaghetti sauce, sugars are used to cut the acidity. Try snacking on fruit and nuts instead."

Saving sugary sweets for special occasions rather than a regular routine can help curb a sweet tooth. "You crave what you eat," Shifler Bowers said. "Your body can forget about foods, so to speak, so the longer you abstain from them, the easier it will be. You can still enjoy them at times, but you won't need to eat the same amount."

When it comes to children and sweets, the longer parents wait to introduce them to sugar—even the sugars in juices—the better.

"Their [taste buds](#) are still developing, so if they get used to sweet foods, that is what they are going to want to eat as they get older," Shifler Bowers said.

She recommends children ages 1 to 3 years old consume no more than four ounces of fruit juice a day. "It's really easy to consume a lot of [sugar](#) when drinking sweet beverages. Instead of juice, try offering children [fruit](#) such as melons or berries instead, so they get plenty of fiber."
