

Female doctors less likely to be promoted to upper faculty ranks

3 December 2020

professors were less likely to be promoted to associate professor than their male counterparts (hazard ratio, 0.76). For promotions to full professor and appointments to department chair, similar sex disparities were seen (hazard ratios, 0.77 and 0.46, respectively). Over time, these sex differences in promotions and appointments did not diminish and were not smaller in later versus earlier cohorts.

"In an era in which women have closed the sex gap with respect to medical school admission, women remain underrepresented in upper faculty ranks," the authors write.

(HealthDay)—Women physicians in academic medical centers are less likely than men to be promoted to upper faculty ranks, according to a study published in the Nov. 26 issue of the *New England Journal of Medicine*.

Kimber P. Richter, Ph.D., M.P.H., from the University of Kansas School of Medicine in Kansas City, and colleagues merged data from the Association of American Medical Colleges on all [medical school](#) graduates from 1979 through 2013 with faculty data through 2018 to examine promotion to upper faculty ranks among [women](#) versus men. Data were included for 559,098 graduates from 134 U.S. medical schools.

The researchers found that fewer women than expected were promoted to the rank of associate or full professor or were appointed to the post of department chair in most of the cohorts. After adjustment for graduation year, race or ethnic group, and department type, in analyses that included all the cohorts, women assistant
